

===== Project plan 15 to 23 May =====

AI Claims Processing Agent

(Best for complex workflows + enterprise thinking)

Objective

Build an agent that simulates **insurance claim processing**

Core Features

- User interaction:
 - “Submit a claim”
 - “Check claim status”
- Data collection:
 - User details
 - Incident details

Agent Capabilities

- Guide user step-by-step
- Validate inputs
- Generate claim summary

Advanced Agent Logic

- Multi-step workflow:
 - Collect data
 - Validate
 - Store
 - Generate report

- Decision logic:
 - Flag incomplete claims

Tech Stack

- Python + FastAPI
- PostgreSQL
- React / Chat UI

Deliverables

- Claim processing agent
- Workflow system
- Summary/report generator

Real Value

Aligns with your **WhatsApp insurance bot idea**

Suggested Structure for Project

Foundation

- LLM integration
- Basic chatbot
- DB schema design

Tools + APIs

- Build backend APIs
- Connect agent with tools

Agent Intelligence

- Multi-step reasoning
- Memory implementation

Productization

- UI (React)
- Testing
- Demo + optimization

Evaluation Criteria (Across All Projects)

- 🧠 Agent decision-making (MOST IMPORTANT)
- 🔗 Tool/API integration
- 🏗️ System design
- 🖋️ Code quality (Python)
- 🌍 Real-world usability
